

Program Name

Progress

Updated in human-facing, simple language with hover-over definitions to aid novice users.

1- Upload Source Material

2- Input Question and set precision

3- Document Review

4- Task Review

5- Execution

6- Validation

Program Description text

Step 1:

Source Material

What information do you want to use?

Upload pdf / txt here.

(Note- want to make sure multiple files can be put here)

Step 2:

Question

What information do you need?

Input question here

Precision Required

Strict

Exploratory

Program Description text

Step 3:

Document Review

Section count — `len(sections)` from `load_document()`
Section headers — already in every dict as `header`, listable as a document outline
Word count — derivable from `full_text_from_sections()`
Structure type — whether the document parsed as sectioned (real headers) vs. flat (`DOCUMENT` or `PREAMBLE` only). That's meaningful feedback.
Parse success — implicit. If the screen loads, the parser didn't raise a `ValueError`. That's a silent trust signal.

Step 4:

User Approval

Display tasks as understood for user approval.

Note: Terminology should be simple and human facing with hover-definitions where needed.
